

It's the general view of the Olympic town. The environment is very elegant and all the equipment is completed. Besides, the town can be used as residence after the Olympic.

The Gate of the Olympic town

The apartments of the Olympic town have special roofs. The roofs are all planted to create O₂

sustainable、livable、convenient

The petal as well as the other part of the main island can be dismantled and transported to other area. So, after the Olympic, our main island can be moved like a transformer.

Our main station includes a bus station and a railway station. This station together with Sinkiba-station, can make transportation work on well.

The Buses in the main station specially prepare for the athletes. And some of the bus are prepared for tourists.

When it rains, the five petals inside can close to resist the rain and guarantee the match go on smoothly.

When it's sunny, the inside five petals will work as five solar panels. They will open and increase the interface to the sunshine to collect the energy from the sun.

The island on the sea is a big energy collected machine. Many people walk on the ground. The pressure can be transformed into the energy. The outside five petals can restore energy which can offer the electrical energy to the main stadium. In this way, Everyone can make energy to support the Olympic.

This area is designed in Japanese style for tourists. This area is not only very close to the two main stations, but also very close to the main stadium and other stadiums. In addition, tourists can enjoy the elegant environment, buy many souvenirs and learn some Japanese culture.

The gate to main island

Around the main island, on the west and east locates many modern houses. They are designed for tourists also. We just aim to guarantee fans can enjoy the Olympic.

Water Front Paradise
